Weinig Ultra Series Finger Jointer-

State of the art technology

The shaping unit cuts the finger joints into the the face of the package of timber. After rotating, the joint is cut into the second face - after the cutter spindle has automatically shifted by one half finger to ensure a precise joint.

Exact glue application

Following the second cutting process, the exact required amount of glue is applied via the patented Flakenjet process. The profiled and glued timber pieces are fed into the hydraulic press with integrated saw, cut to length and then pressed.

Manual or Auto turntable

The Ultra TT model makes use of an automatic servo-turntable, increasing performance by up to 40%.

Overview and features

Specifications

Minimum workpiece length	150mm
Feed speed	15.2m/min (Vertical joint)
Minimum workpiece width	40mm
Maximum workpiece thickness	80mm
Motor	22kW (29.5hp)

Specs shown are for a standard model, but Weinig offer a wide variety of options, so talk to us about customising a machine to suit you.
